(Study 04)	
(In – text – Citation)	(Akgun et al., 2021).
<u>Results related to the research question</u>	The study showed that aromatherapy massage led to a significant improvement in sleep quality among older adults. After the intervention, participants' PSQI scores decreased from 15.93 to 4.93 , indicating better sleep quality.
<u>Sample</u> ○ Final Sample Size ○ Age Range ○ Gender ○ Country ○ Selection Criteria	Final Sample Size: 15 Age Range: 65- 88 Gender: Both female and male Country: Istanbul, Turkey Selection Criteria: Convenient Participants
<u>Instruments</u> (Type)	Pittsburgh Sleep Quality Index (PSQI)
<u>Procedure</u>	Pittsburgh Sleep Quality Index (PSQI) The PSQI was administered before the intervention to measure the participants' initial sleep quality. Then, they received aromatherapy back massage using a lavender and almond oil mixture for 20 minutes, three times a week over two weeks. After completing the six massage sessions, the PSQI was given again, and the pre- and post-scores were compared to evaluate the effect of the aromatherapy massage on sleep quality.
